

## CLIPPER AND BLADE CARE TIPS

Tips to keep your equipment in great shape!

- 1 Review the Use & Care instructions provided with your tool, as each one requires unique attention.
- 2 Wash and dry the animal prior to clipping to extend the life of the clipper and blade as well as improve performance.
- 3 Clean the blade and under the drive cap by using a soft brush (or old toothbrush) to remove hair and debris from hard-to-reach spaces.
- 4 Disinfect blades with Cool Care Plus®. Review the instructions on the can for proper usage. Ensure that blade surfaces are wet for 10 minutes to kill germs and viruses.
- 5 Oil your blades using the 5-point oiling system. With the blade pointed down, use 3 drops across the teeth and 1 drop on each back rail. Wipe excess oil using a clean, soft cloth.
- 6 If you notice streaks or dragging, it may be time to change the clipper blade drive.
- 7 Keep your cord well cared for by wrapping it loosely during storage. Avoid tangles by keeping the cord straight.

## LIVESTOCK BLADES

The sharp tips on livestock blades are for skimming and sculpting the hair—never for clipping down to the skin. The Blue Ribbon® II Blocking Blade has especially sharp teeth so that it can cut through adhesives and show day hair products.

## WORK SMARTER, NOT HARDER.

### Using the Pulse Li 5 Clipper for Equine Grooming

The Pulse Li 5 Clipper is extremely quiet, making it perfect for grooming ears, muzzle, bridle path and fetlocks. It features a 5-position blade that can be adjusted to cut lengths between 40 and 9, allowing for grooming versatility. Additionally, it features a lithium-ion battery that lasts up to 2 hours for nonstop, cordless clipping.

**SHOW EDGE®**

By pairing our extra-wide, Show Edge® livestock blades with your detachable blade clipper, you get the benefits of the wider cut found on heavy-duty shears but at a fraction of the weight.
